Sational Irrigation Congress.

By the authority of the national executive committee, the fourth National Irrigation Congress is bereby called to meet in the city of Albuquerque, N. M. for the four Saltreat Connett of Women-Res of the laya beginning September 16,

The present year is proving to be the most remarkable in the history of American krigation. It has seen a wonderful awakening of | lowed into the precincts of the house of popular interest in the cause; throughout the east, resulting in the organization of most potential forces for the purpose of cooperating with the western people; the creation of administrative systems in five of them; the recognition of the pressing nature of the problem by the departments of interior and agriculture under whose direction a national board of irrigation has been formed from officials in various departments of the government.

These splendid evidences of the triumphant progress of the irrigasentative and effective session of the irrigation congress in 1896. A further reason for such a gathering is the fact that the presidential campaign of 1896 will be mangurated previous to the assembling of another session of this body, and that it is thus necessary to formulate at Albuquerque the demands which the friends of irrigation will desire to make upon the great political parties of the nation.

In view of the nature of the oppurtunity, a program of extraportance will be arranged, and it rights. But if there is not quantity there scenes and pleasure resorts which abound is anticipated that this session of is quality the congress will be more widely

BASIS OF REPRESENTATION. The county seat is Silver City, attest of the Third National Irrigation of England.

road, and cojoys the advantages accruing to every large supply depot its banks, court house, hospitals, stores, public schools, hotels and other ouild.

3 Five delegates at large, to be to would do credit to an eastern county appointed by their respective govings of a public and semi-public character would do credit to an eastern county near. Since the opening of the Santa Rila copper mives in 1800 it has been a town site, but the energy of the last decade has done more for its advancement than all the previous years. Situated as it is, surrounded by mills and concentrators, almost in the very center of the mining region, its stability and prosperty are assured. Large business blocks are built or projected, and during the year 1803 about twenty-five business houses and handsome residences were built within the city limits. It has a number of civic and secual organizations. Its water works, iven a tout two miles from town, assure the city not only of a good and pure supply of water, but, us there is a normal passure in the fire hydrants of 1st pounds to the inch, immunity from the ravages of that dangerous element is curtain. The water is pumped to a high reservoir by powerful and borticultural societies, and societies of engineers.

States senate and house of representatives, and each governor of a

This method of developing a water supply is worthy of a complete and technical description. Space however does not permit this. The water is repped on the bed rock by sub-drama. The location is in a wide swale or shallow ralley leading down from the Phose Altestowards Silver City. No water whatever runs on the aurines. This underdrainage is an important factor in the compound development of the arid west, buver City is a notable example. Not cally has she an ample supply for domestic and assistary purposes of a large city, not dependent on chance showers, but through her passages system she is re-
